CI+IRU

RESEARCH AND INNOVATION CENTER
IN URBAN REGENERATION

The University of the Basque Country (*Universidad del País Vasco, UP/EHU*) through the Quality of Life in Architecture Research Group (*Calidad de Vida en la Arquitectura, CAVIAR*) is in the process of establishing a **Research and Innovation Center in Urban Regeneration** (*Centro de Investigación e Innovación en Regeneración Urbana, CI+IRU*) that will operate at the crossroads of theoretical-scientific knowledge and its transfer and application to implementation projects.

One of the first initiatives promoted by CI+IRU has been the dynamization of an **international network** for research and innovation in Urban Regeneration. Thus, since 2021, the annual International Seminar has been established as a meeting point for agents of excellence in Urban Regeneration.

The international research network is currently formed by more than **30 interregional, national and European agents**, including entities from academia, public administration and the private sector. In this 4th edition, we will work strategic lines and its innovation tracks:

Urban Mobility
Renewable Energies

2 Renaturalization
Green Infrastructure

3 Circular Economy
Sustainable Architecture

4 Governance
Social Innovation

Scopes of Work

CI+IRU is intended as a **tool to promote projects** that bring together and **disseminate knowledge** in the field of **sustainable cities** in the **Basque Country** in order to position the region as a reference territory in the field of **innovation for Urban Regeneration**, not only at the theoretical and scientific level but also in terms of application. It aims to realize the best urban regeneration ideas for sustainable cities within the **European framework of 2050**. To achieve this, CI+IRU fosters the **transfer of scientific excellence** by achieving innovation through technological leadership and social commitment.

Research and Innovation

Specialized Training

Implementation and Entrepreneurship

Transfer and Dissemination
